About me: Frontend Developer with 1+ year of experience. Built 7+ pet projects using **API, Express, MongoDB, Sanity, Telegram Bot**, and modern tools like **Material UI, Ant Design, ShadCN** and **Tailwind**. My strengths include self-driven learning (picked up **Python** at a basic level independently), task prioritization, and a results-driven approach. I'm seeking a project where I can contribute to building a meaningful, innovative product while continuing to grow professionally.

Skills:

- Programming:** JavaScript, TypeScript
- Frameworks:** React, Next.js, Node.js, Redux
- Databases:** MongoDB, Sanity, Appwrite
- API:** REST, JSON, Express
- Tools:** jQuery, HTML/CSS, SCSS, Postman, Telegram Bot
- Control System:** Git
- IDE:** VS Code, WebStorm, Cursor

Work experience / Projects

Volunteer Frontend Developer
VisionCore (Istanbul, Turkey)
January 2025 - now

Project: VisionCore website (Site: [VisionCore](#))

Stack: TypeScript, React, Redux, Ant-d

Achievements:

- **Optimized code cleanliness and efficiency by 40%** through refactoring and best practices.
- **Implemented a multilingual UI system** using **i18next** with **React** bindings, enabling instant language switching and persistent user preferences via **localStorage**.
- **Developed a reusable React modal component**, reducing duplicate code by **40%** by encapsulating logic in a custom hook (**useModal**). Ensured accessibility compliance (**ARIA** attributes).
- **Delivered fully responsive designs** for all screen sizes (mobile-first approach).
- **Worked with modern libraries:** **Formik** + **Yup** for forms, **Swiper** for interactive carousels, and **i18next** for localization.

Frontend Developer (Internship)
Dara Solutions (Almaty, Kazakhstan)
June 2024 - November 2024

Project: National Education Database (Site: [NED](#))

Stack: JavaScript, React, Redux, CI/CD, GitLab

Achievements:

- Developed **5+ new modules** to improve usability and efficiency for educational staff.
- Fixed **30+ bugs**, enhancing system stability and performance.
- Implemented a **RESTful API** between frontend and backend, ensuring seamless data interaction.
- Worked with **Formik**, **Yup**, **UUID**, and **i18next**

Abdymalik Batyrkulov - Frontend-Developer

Pet-projects

April 2024 - now

Project: Blog website

Stack: JavaScript, React, Redux, NodeJS, MongoDB

Achievements:

- **Implemented responsive design** across various screen sizes and devices.
- Developed **authentication**, including user registration, login, and CRUD operations for posts.
- Built interactive features such as post/comment liking/disliking, commenting, and replies.
- Designed a database system using **MongoDB**, with backend integration via **Node.js (Express)**.
- Libraries: **Swiper** (for touch sliders) and **React Hook Form** (for form management).

GitHub: github.com/abdymaleeq925/blog

Website: blog-4wsh.onrender.com

Project: Crypto website

Stack: JavaScript, React, Coinranking API, ant-d

Achievements:

- Built a **responsive website** with styling powered by **Ant Design**.
- Integrated **Coinranking API** to fetch real-time cryptocurrency data.
- Implemented **top 50/10 cryptocurrencies** (daily rankings), **search functionality** by coin name and **price history charts** with customizable time periods (linear graphs).
- Developed a **dedicated news portal** for crypto-related updates.
- Libraries: **React Masonry CSS** (for dynamic layouts) and **Moment.js** (for date/time handling).

GitHub: github.com/abdymaleeq925/cryptnt

Website: cryptnt.vercel.app

Project: Storage Management Website

Stack: Next.js, TypeScript, ShadCN, Appwrite

Achievements:

- Implemented user authentication with Appwrite
- Constructed file uploading, downloading, searching and sort functions
- View, manage and share with other users.
- Gain insights at a glance with a dynamic dashboard that showcases total and consumed storage, recent uploads, and a summary of files grouped by type.
- Has modern responsive design
